amirgireevportfolio.netlify.app github.com/AmirGireev Eligible for Erasmus+ Funding

Summary

I am an International Media Computer Science student based in Berlin. Fully funded via Erasmus+. I am currently looking to take my skills abroad for an internship that will start in April 2027 and last for at least four months. Through my studies, I have built a solid foundation in frontend/backend development, game design/development and AI.

Language skills

German — Native

English — Fluent

Russian — Conversational

Spanish — Basic

French — Basic

Education

International Media Computer Science (Bachelor)
Hochschule für Technik und Wirtschaft Berlin
04/2024 – Present

Skills

Programming Languages
Python, JavaScript, HTML, CSS, C#

Frameworks and Libraries
Django, Streamlit, RAG Pipelines, LLM Integrations, Pandas, NumPy, Unity, 2D Physics, Tilemaps

Other
SQLite, ChromaDB, Cloudinary, Autodesk Maya, PBR Materials, Arnold Renderer, Raytracing

Technical Projects & Experience

AI / Gameplay Programmer | Underwater AI Bot 10/2025 – 02/2026
(Java, 2D Pathfinding, Steering Behaviors, Vector Math)
- Developed an autonomous AI agent in Java for a 2D underwater game, capable of independently executing resource collection (pearls/trash), air supply management, purchasing shop upgrades and more

AI & Backend Developer | Multilingual RAG AI Assistant 08/2026 – 09/2026
(API, Python, Large Language Models (LLMs), RAG Pipeline, Vector Database (ChromaDB), Streamlit)
- An AI assistant using a RAG pipeline
- The interactive Streamlit web app processes official Spanish and Portuguese documents about Iberian wildlife
- It uses large language models to answer user questions

Full-Stack Developer | Klothes Django Web App 04/2025 – 08/2025
(Python, Django, SQLite, HTML, CSS, cloudinary)
- Klothes is a Django web app for discovering outfits
- Users can create accounts to search outfits by style, color, weather, and gender
- Users can also browse creator profiles, and save looks to a personal virtual wardrobe

3D Environment Artist | Architectural Visualization 10/2025 – 02/2026

(Autodesk Maya, Arnold Renderer, PBR Materials, UV Unwrapping, IBL/HDRI Lighting)

- Designed and modeled a 3D living room using Autodesk Maya based on a photo reference
- Used UV unwrapping and applied custom Arnold shaders with PBR (Physically Based Rendering) materials to achieve authentic surface properties and textures
- Designed an lighting setup utilizing HDRI-based Image-Based Lighting (IBL) combined with supplementary studio lights
- Optimized Arnold sample settings and applied denoising techniques to render the final scene in 1080p

Graphics Programmer | Custom Raytracer Engine 04/2026 – 08/2026

(Java (AWT/Swing), Linear Algebra, 3D Rendering Algorithms)

- Engineered a custom raytracing enginefrom scratch in Java, capable of rendering 3D scenes
- Implemented computer graphics features including multi-sampled depth of field, dynamic lighting, soft shadows, and physically based material reflections
- Developed a mathematical foundation for vector calculations (Vec3), surface intersections, and Constructive Solid Geometry (CSG)
- Built a custom transformation system allowing for translation, rotation, and scaling

Gameplay Programmer | 2D Parkour Platformer

(Unity, 2D Physics, C#, Tilemap)

- Developing a dynamic 2D jump-and-run parkour game with a strong technical focus on fluid, responsive character movement and overall "game feel"
- Programmed a 2D character controller (PlayerController) in C#, handling physics variables like adjustable acceleration/deceleration, variable jump heights, ,wall-sliding/jumping mechanics, coyote time, jump buffering, dash and more
